MEMO FOR FILING

Re: Geokinetics Inc.
#43-047-001
Sec. 2, T. 14 S., R. 22 E.
Uintah County, Utah

Oil Shale Pilot Project

This site was inspected on November 13, 1975. Coring was in progress during the inspection. Surface disturbance was observed to be minimal on this pinyon/juniper-grassland community. Several tracts were made by vehicles and the drilling apparatus for coring. Vegetation observed consisted of Utah juniper (*Juniperus scopulorum*), pinyon pine (*Pinus monophylla*), big sagebrush (*Artemisia tridentata*), fourwing saltbush (*Atriplex canescens*), winterfat (*Eurotia lanata*), Bluestem wheatgrass (*Agropyron smithii*), and cheatgrass (*Bromus tectorum*). Cattle were grazing in the immediate vicinity of coring activity.

According to Dan Zerga, Geokinetics employee on the site, a micro-scale extraction process is about to be started. Weather conditions permitting, larger scale operations will begin shortly thereafter.
